

Q/ris 3000 Mobile Imaging Manager

medQ provides the only workflow and informatics software specifically designed for the diagnostic imaging process in mobile imaging operations. Our Q/ris 3000™ fully integrates and manages the business operations and imaging workflow including; ordering, scheduling, insurance pre-verification, route management, technologist dispatching and worklist, multisite scanning order QC, and charge capture (including Medicare transportation and ABN), radiologist reporting and communication to the referring physician into a rules driven easy to navigate workflow process. Full integration of the Q/ris 3000™ with any PACS, teleradiology or even film based operation, including DICOM modality work list functionality, will also enable the enterprise to go to a virtually paperless environment.

medQ also provides operational management services to help redesign enterprise work process and job responsibilities to take advantage of the power of the system. This includes a series of real time, on-demand reports to create a real time process to manage clinical and business performance to provide a true focus on improving the quality of patient care and a positive impact on patient outcomes.

The Q/ris 3000™ web enabled architecture allows radiologists to read exams from any location at any time to create a virtual Radiology operation to significantly improve report turnaround time. Referring physicians can access their patient's results and immediately see the reports and images. This is a significant improvement in their effectiveness and significantly reduces the cycle time in diagnosis, thus speeding the time to initiation of treatment protocol.

Why is the Q/ris 3000 your best option?

- ▶ Open and component based architecture allows custom configuration – no “one size fits all”. This will allow each zone or route to be set up consistent with their customer's needs, yet still allow enterprise management.
- ▶ Operations can be done in an on-line and off-line mode providing a flexible solution for mobile operations when connectivity may be an issue.
- ▶ Embedded, table-driven, customizable and automated business and clinical rules improve process efficiency and productivity, reduce errors and reduce real costs.
- ▶ Q/ris dispatch module improves technologist/resource productivity and utilization
- ▶ Allows technologist note collection and scanning of technologist worksheets to be associated with the study real time for the reading radiologists and historical files – no waiting for paperwork to catch up with the images.
- ▶ Insurance pre Verification and 100% charge capture/billing of exams and supplies improves collections and cash flow.
- ▶ Seamless integration at the radiologist's desktop, with voice recognition, creates efficient patient reporting and faster turnaround times – minutes instead of hours
- ▶ Real-time management reporting - on-line and printed to view - patient status as well as critical resource utilization and productivity management.
- ▶ 7 x 24 customer support hot line
