

Q/ris 3000 Workflow Management

The Q/ris 3000™ is a fully integrated, end to end workflow management suite of products and services scalable from a single imaging center to a multi-location enterprise operation. This architecture provides a comprehensive view of the patient encounter. The modular construction makes for easy deployment in a configuration to meet your business needs. The net result is an efficient and productive operation that improves patient service and care and referring physician satisfaction with a measurable impact on both top and bottom line performance:

PATIENT REGISTRATION:

Full on line registration, with automatic insurance pre verification – one time data capture no duplicate order entry – for in patient and out patient workflow processes.

ORDERING AND SCHEDULING:

Rules driven, intuitive easy to use scheduler – no patients in the wrong room or time. On-site for web based solutions support computerized physician order entry (CPOE)

FRONT DESK WORKLIST:

Quick and easy patient check in process, forms are stored on line and/or scanned for virtual paper free operations.

MODALITY WORK LIST:

Fully automated population of Modality Work List; including MPPS capability.

TECHNOLOGIST WORKLIST:

Allows techs to manage exams and add information for the radiologist –Technologist notes and scanning capability to provide on line real time information.

For more information contact us at medq.info@medq.com, call 1-800-597-6330 or visit our website www.medq.com

MANAGEMENT REPORTING PACKAGE:

Dynamic, real time dashboard for viewing clinical and business data on line. Includes the ability to create custom reports.

PACS INTEGRATION:

Full, seamless integration with any PACS. This includes the capability of the technologists to scan all documents into the PACS and display as a DICOM series with the study.

REPORTING PLUS+

Real time, embedded Voice Recognition, extensive use of macros and structured reports to support multiple workflows, structured reporting On site and remote operations.

DICOM STRUCTURED REPORTING

Provides the capability to set up specific structured reporting tables and have these tables be automatically populated with data from compatible modalities

REPORT DISTRIBUTION:

Automatic report distribution via auto fax, encrypted email, network printing or HL7 messages. Includes Critical Results Notification, tracking and reporting.

CRITICAL TEST RESULTS REPORTING:

360 degree, closed loop critical findings workflow. this includes real time notification protocols, tracking and management reporting.

WEB ENABLED FOR 7 x 24 ACCESS:

The entire architecture is multi tier construction to support any workflow requirement and web enabled to allow anytime, anywhere access

TELERADIOLOGY & READING SERVICES:

Capability to bring images from any location and multiple PACS then integrate into a single work list for rapid reporting. Can be added to an existing RIS, or as a stand-alone.

BILLING:

Fully automated, integrated billing module provides 100% charge capture to ensure all works billed. Optional HL7 connections to outside billing services also available

REFERRING PHYSICIANS PORTAL:

Allows ordering physicians to register patients, enter orders, see reports and view studies on line in a real time, 7x24 mode

2014 EHR MODULE:

This is a Meaningful Use certified EHR. Integrated into the Q/ris 3000 workflow to have a single point of data capture and display.
