

Q/ris 3000 Critical Test Results Notification

The **Q/ris Critical Test Results Management module** With the Q/ris CTRM V2.0, radiologists will be able improve the identification, triage and results communication protocol to the ordering physician, as well as establish a delivery verification documentation and auditing process. Fully automated and integrated in the Q/ris 3000 dictation software, radiologists will be able to assess the severity of the diagnosis and quickly contact the ordering physician to notify of the condition.

- Embedded directly in the Q/ris 3000 Reporting PLUS+ for real-time ease of access.
- User defined result categorization based on urgency – red, orange, yellow
- Radiologist work space to get ordering doctor information and record communications
- Follow up work list for result tracking to ensure positive, closed loop communications
- Multiple contact methods and confirmation documentation protocols
- A positive confirmation methodology tracks this process from start to finish and logs all attempts until notification is confirmed.
- Full management reporting of process, contacts and turnaround times
- Automatic footer on the final report to show contact person, date and time.
