

Q/ris 3000 EHR module

The Q/ris 3000 Electronic Health Record (EHR) module is a 2014 (stage 2) MU certified program, seamlessly integrated into the Q/ris 3000. This program meets all criteria for full radiology certification to enable all eligible physicians (EP's) to claim applicable Medicare reimbursement

Points of value of the Q/ris 3000 EHR module

1. There is a single point of capture to enter data only once using essentially the same arrival process – no additional staffing needs to set up EHR patient for basic information.
2. A redesigned workflow process that has all the prework completed during the check in process and presents an “exam ready” patient to the tech will improve asset utilization.
3. A unique set of special checklists and real time reports/monitors to track events as they happen.
4. Ability to auto-populate information we get bi-directional with HIS or outside EHR.
5. The EHR is very intuitive, easy to use and easy to train users.
6. Interactive patient portal
7. Includes a physician portal for easy ordering and obtaining patient data on line – supports CPOE requirements.
8. Hotlink to allow navigation from imaging patient registration etc. to EHR and vice versa with only one click of the mouse.
9. Can handle multi-facility operations and patients.
10. Easy tracking and ordering of lab results, even if done off site.
11. Automatically populated and intuitive dashboard to support user attestation for Medicare reimbursement.
