## **Q/ris 3000 Patient Balance Estimator**

The Q/ris 3000 Patient Balance Estimator, an integrated solution that enables organizations using the Q/ris 3000 to accurately determine a patient's financial responsibility prior to providing service. This module is a critical practice that enables organizations to get paid faster and more accurately, while reducing days in A/R and ultimately improving cash flow.

The Q/ris 3000 Patient Balance Estimator leverages a massive, national database of healthcare payment information. The solution is able to accurately predict patient financial responsibility using the organization's actual remit and payment data. While other patient estimation solutions required extensive contact loading and calibration with content from multiple payer organizations, medQ's solution enables you to get up and running quickly and easily. Current clients using the solution are seeing point of care patient collections increase 300%. Additionally, patients have expressed that they like to know exactly what a test or scan will cost prior to receiving, so they can budget and make clinical decisions accordingly. This is a huge part of the solution "getting full reimbursement in a timely manner is a critical need in today's market. With constant reductions in Medicare and Insurance reimbursement, managing the patient balances is a very critical business need. Our PBE provides a quick and upfront way to help improve cash flow and profitability.

Q/ris 3000 Patient Balance Estimator solution reduces the time it takes a provider organization to collect revenue from the typical 120 days to an average of only 30 days. Patient Balance Estimation has the following unique features:

- **Multiple payment collection options:** Patient Balance Estimation allows any organization to collect patient financial responsibility prior to providing services via cash, check, credit/debit card or a payment plan can be made ahead and negotiate ahead of time
- **Automated integrated workflow:** The solution is integrated directly within the Radiology workflow and is done directly from the application without the need to re-enter data
- **Ease of use and implementation:** The Patient Balance Estimation intuitive workflow does not require any specialized user training or expensive contract management system implementations
